

Create credentials to access your database instance

Objective(s)

At the end of this lab you will be able to:

- Create your own instance of database on IBM Cloud using Db2 service

Exercise

Database credentials are required to connect from remote applications like Jupyter notebooks which are used in the labs and assignment in the last two weeks of the course.

0. Go to your IBM Cloud Resources dashboard (or click on IBM Cloud in the top left corner):

<https://cloud.ibm.com/resources>

Note: you may need to log into IBM Cloud in the process of loading the resources/dashboard.

If your connection is slow it may take over 30 seconds for the dashboard to fully load.

1. Locate and click on your Db2 service listed under Services.

(NOTE: In the example below the service is called **Db2-f7**. Your Db2 service may have different letters/numbers in the suffix e.g. **Db2-f8**, **Db-50** etc.)

Q	Filter by name or IP address...	Filter by group or org...	Filter...	Q	Filter...	Q	Filter...
^	Cloud Foundry apps (3)						
js	iot-solution-tutorial	...	@gmail.com / se...	London	SDK for Node.js™	●	Stopped
py	your-name-computer-vision-app	...	@gmail.com / lav...	London	Python	✓	Started
^	Cloud Foundry services (1)						
Car Diagnostic API	Car Diagnostic API-6b	...	@gmail.com / dev	London	Car Diagnostic API		Provisioned
^	Services and software (8)						
Cloudant-ex	Cloudant-ex	Default		London	Cloudant	✓	Active
Db2-f7	Db2-f7	Default		London	Db2	✓	Active
Language Translator-iu	Language Translator-iu	Default		London	Language Translator	✓	Active

2. Click on Service Credentials in the left menu

Resource list /

Db2-f7 ✓ Active Add tags

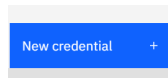

Manage

Getting started

Service credentials

Connections

3. Click on the button to create **New credential**

In the prompt that comes up click the **Add** Button in the bottom right:

Create credential ×

Name:

Service credentials-3

Role: ⓘ

Manager

Advanced options

Cancel Add

4. Check the box to **View credentials**

5. Copy and save the credentials making a note of the following:

- **port** is the database port
- **db** is the database name
- **host** is the hostname of the database instance
- **username** is the username you'll use to connect
- **password** is the password you'll use to connect

You need to scroll down to get the credentials details.
